- Protective sapphire glass for your iPhone camera lens provides the best protection against scratches and bumps, which is invaluable when you want to keep your device in perfect condition. This product is designed to provide extreme hardness sapphire glass that protects your camera from damage, while its usability ensures ease of use.
- Sapphire glass is known for its hardness and scratch resistance. Thanks to this property, you can be sure that your iPhone camera will be protected from damage when handling it, for example, in your pocket or bag. The sapphire glass also protects the camera from bumps and drops, which is another advantage of this product.
- This protective glass with stainless steel frame is designed to be easy to install and use for everyday use. This product can easily be stuck to your iPhone camera without the need to use any additional special tools or seek help from a professional.
- The protective sapphire glass on your iPhone camera also has high transparency, which means you can easily take photos and record videos without suffering from blurry or out-of-focus images. This product also allows you to use various filters and effects that can improve the quality of your images.
- super scratch resistant; hardness of 9 Mohs, the second hardest grade after diamonds, which are 10 Mohs
- PVD stainless steel lens frame in your phone's colour to protect the sapphire crystal from impact during normal use
- not easily scratched compared to regular glass of higher hardness
- 11.6W thermal conductivity is 10 times higher than ordinary glass, very fast heat dissipation ability
- full coverage of camera lenses with perfect adhesion without peeling due to extra strong adhesive at 100% transmittance
- EAG certified 99.9999% pure sapphire, excellent quality

- Sapphire glass with 9 Mohs grade highly scratch resistant with installation kit included.
- Sapphire glass is an excellent solution for protecting your electronic device. This material is extremely hard, providing a high level of resistance to scratches, drops or other damage.
- Due to its hardness and durability, sapphire glass is also very durable and can provide you with long-lasting protection against everyday wear and tear. In addition, sapphire glass features high transparency, which ensures excellent readability of your device's screen.
- Sapphire glass is also highly resistant to temperature changes, meaning it won't warp or crack with sudden temperature changes. Thanks to this feature, you can use your device in a variety of conditions, such as sports activities or extreme weather conditions.
- Another advantage of sapphire glass is its ability to resist chemicals, such as acids, that can easily damage other materials. Sapphire glass is therefore the ideal solution for those who need maximum protection for their device.
- Sapphire glass also features excellent resistance to ultraviolet rays, which protects your eyes and your device from dangerous sunlight. In addition, sapphire glass can also reduce glare and improve overall screen quality.
- In conclusion, sapphire glass provides a high level of protection for your electronic device, thanks to its hardness, durability, high transparency, chemical resistance, resistance to temperature changes and ultraviolet radiation. Investing in sapphire glass can save you a lot of money and stress from damaging your expensive equipment.

- super scratch resistant; hardness of 9 Mohs, the second hardest grade after diamonds, which are 10 Mohs
- not easy to scratch compared to normal glass of higher hardness
- thermal conductivity of 11.6 W is 10 times higher than ordinary glass, very fast heat dissipation ability
- AF electroplating with the highest grade of anti-fingerprint oil from Japanese company Shin-etsu
- smoother and more sensitive to touch, test friction time ?10000
- strength and durability test of rounded edge slide: 30KG
- EAG lab certified 99.9999% pure sapphire, excellent quality
